ISO 9001:2015 to AS9100D - QMS Upgrade Instructions / Checklist

This instruction / checklist is intended for use in upgrading your Quality Management System for the transition from ISO 9001:2015 version to the AS 9100 D revision for Quality management systems used in the aviation, space, and defense industries.

The above Quality Management Systems are compatible with each other and have common requirements.

In the AS 9100 D and ISO 9001:2015 standards the requirements are described in:

- Clause 4 Context of the organization
- Clause 5 Leadership
- Clause 6 Planning
- Clause 7 Support
- Clause 8 Operation
- Clause 9 Performance evaluation
- Clause 10 Improvement

You have the ISO 9001:2015 version in place and now have the objective of upgrading the system to the 2016 Rev D revision. The good news is that since you are familiar with formal management systems, this initiative will be relatively straightforward.

Essentially, the documentation package for the management system will contain:

- One condensed Manual to introduce the documented information required for AS 9100 D.
- A group of procedure/system documents in your QMS with updates to reflect a document numbering system related to the new clause numbers and to incorporate the upgrades for AS 9100 D requirements,
- A group of forms and attachments needed for the documented information and systems.

The documentation will need to be reviewed, upgraded, and implemented. The first step is to assign a person responsible for the QMS, such as with a Management Representative to become familiar with the changes for the 2016 version of the AS 9100 D standard. Visit the9100store.com for training materials, resources, and information on quality management systems requirements.

The following table with detailed instructions focuses on the areas of the documentation required for the AS 9100 D quality management system. As you undertake the task of upgrading your quality management system from the ISO 9001:2015 version to the 2016 version, note that the intent of the main clauses is shown in blue font, and in the first left hand column of the instructions, the clause numbers highlighted in green indicates where specific AS 9100 D additions are made to ISO 9001:2015. Keep in mind that while you need to focus on the new requirements of AS 9100 D, your company now has an opportunity to review the exiting ISO 9001:2015 QMS and improve the system while incorporating the AS 9100 D requirements.

Use a copy of the AS 9100 D standard along with this instruction to pinpoint for your organization the areas that need attention. You may want to make notes and add comments in the space available to the right and the left of the column for reference documentation. Use the upgrade checklist section on the right side of the table to assign the responsibility for the upgrade and to follow up on its completion.

ISO 9001:2015 to AS9100D - QMS Upgrade Instructions / Checklist

			Achieve improvement.

P-815-A

1.0 Purpose/Scope

1.1 This procedure describes the process used to determine and control the selection of key characteristics and critical items of assemblies, components, materials and processes and the usage of same.

2.0 Responsibilities and Authorities

2.1 The product / process engineer is responsible for the selection of all necessary key characteristics and critical items and determining the appropriate data to be collected and evaluated.

3.0 References and Definitions

3.1 Reference

3.1.1 This document addresses clause 8.1 g of the AS 9100 D standard, covering key characteristics and critical items.

3.2 Definitions

- 3.2.1 Key Characteristic The features of a material, process, or part whose variation has a significant influence on product fit, performance, service life, or producibility.
- 3.2.2 Critical Items Those items such as functions, parts, software, characteristics, processes having significant effect on the provision and use of the products and services. including safety, performance, form, fit, function, producibility, or service life.
- 3.2.3 Risk Analysis To determine the importance of, or value of a situation or condition. Broadly defined to include risk assessment, risk characterization, risk communication, risk management, and policy relating to risk.
- 3.2.4 Pareto Analysis A formal technique for identifying the changes that will provide the greatest benefits. A Pareto analysis is a sorted histogram with two features. First is the cumulative distribution curve. Second, the vital few are identified. The histogram is sorted with the greatest occurrences to the left and descending occurrences moving to the right.
- 3.2.5 Failure Mode Effects Critically Analysis (FMECA) A disciplined review technique that focuses on the development of products, materials and processes based upon prioritized actions and in depth analysis to reduce the risk of product failures, and the associated documentation of those actions and review process.
- 3.2.6 Flowdown Technique for identifying key characteristics and critical items for a product or assembly down to subassemblies, details or processes believed to have a variation effect on upper level key characteristics and critical items.

4.0 Resources

4.1 Is there any special equipment or software required? (i.e.; special analysis

Key characteristics and critical items
